

Power and Energy as First-Class AI Design Metrics

Jae-Won Chung
September 29th, 2025

ML.ENERGY

Jae-Won Chung

Fifth-year PhD student at the University of Michigan, CSE

I build **efficient** software systems for AI/ML

Efficient management of time and **energy** as systems resources

Unprecedented Scale

Large

- Frontier models
- Kimi-K2 1T params
- Closed models could be larger

Numerous

- Specialized models
- Thousands of application use cases

Everywhere

- Mixture of models
- Deployed worldwide
- Serving millions

Demand for Compute

More accelerators

Zuckerberg's Meta Is Spending Billions to Buy 350,000 Nvidia H100 GPUs

In total, Meta will have the compute power equivalent to 600,000 Nvidia H100 GPUs to help it develop next-generation AI, says CEO Mark Zuckerberg.

OpenAI, Oracle, and SoftBank expand Stargate with five new AI data center sites

New data centers put Stargate ahead of schedule to secure full \$500 billion, 10-gigawatt commitment by end of 2025.

Challenge: Getting Power

We need the power now

- Next generation large frontier models were due yesterday
- It takes a whole datacenter to train one of them
 - E.g., Meta's Llama 3.1 405B used 16K H100 GPUs

Challenge: Getting Power

Getting power takes time

- Years of planning, approval, lead time, and construction

Global Data Center Trends 2023

New technology is driving record demand but power constraints are inhibiting growth

CBRE RESEARCH
JULY 2023

Challenge: Getting Power

Getting power takes time

- Years of planning, approval, lead time, and construction

Global Data Center Trends 2024

Limited power availability drives
rental rate growth worldwide

CBRE RESEARCH
JUNE 2024

Challenge: Getting Power

Getting power takes time

- Years of planning, approval, lead time, and construction

Global Data Center Trends 2025

Despite persistent power constraints,
hyperscale growth accelerates

CBRE RESEARCH
JUNE 2025

Challenge: Energy Costs and Constraints

Depends on the company & cluster setup

- Electricity costs become operational expenses
- Power source constraints (e.g., 24/7 carbon-free energy)
- Carbon offsetting costs (e.g., Net Zero)

Challenge: Managing Power

Packing within power budget

- Power is a **hard ceiling**; you can't draw beyond capacity
- You want to **pack more accelerators** within budget

Challenge: Managing Power

Packing within power budget *without blowing up the grid*

- Giant **power fluctuations** stress the grid
- May stress the **resonance frequency** of power plant turbines

Energy as a Computing Resource

Every bit of computation consumes energy

- And energy is an increasingly scarce resource
- We don't understand it as well as time

*Measuring, understanding, and optimizing
the energy consumption of AI/ML workloads*

“Where do the Joules go?”

Provisioned Power
(8x AI 100-80GB AI Server)

Patel et al., ASPLOS'24

[d] AI@Meta, Llama 4 Scout Model Card, 2025

Where Do the Joules Go?

One training iteration with 4 pipeline stages and 8 microbatches (IFIB schedule).

Where Do the Joules Go?

One training iteration with 4 pipeline stages and 8 microbatches (1F1B schedule).
Drawn to scale for GPT-3 1.3B on NVIDIA A100 GPUs.

Where Do the Joules Go?

One training iteration with 4 pipeline stages and 8 microbatches (1F1B schedule).
Drawn to scale for GPT-3 1.3B on NVIDIA A100 GPUs.

Cutting 30% Energy Bloat

One training iteration with 4 pipeline stages and 8 microbatches (1F1B schedule).
Drawn to scale for GPT-3 1.3B on NVIDIA A100 GPUs.

*“How does energy
interact with time?”*

Energy consumed vs. time taken to
train DeepSpeech2

Time vs. Energy Trade-off

Training time and total energy affected by
batch size and GPU power limit

Results from training DeepSpeech2 on LibriSpeech on an NVIDIA V100.
Similar trends found across four GPU generations.

Time vs. Energy Trade-off

Which yellow point is the best?

Results from training DeepSpeech2 on LibriSpeech on an NVIDIA V100.
Similar trends found across four GPU generations.

Time vs. Energy Trade-off

15% to 76% energy reduction

across diverse models
and multiple GPU generations

Results from training DeepSpeech2 on LibriSpeech on an NVIDIA V100.
Similar trends found across four GPU generations.

Time vs. Energy Trade-off
